TRIPPERR – WEB APPLICATION PRODUCT PLAN

1. Product Overview

Tripperr is a travel-tech platform being built to serve African travelers by combining curated travel experiences, global booking capabilities, payments, visa assistance, and AI-powered travel planning into one trusted product..

The platform will begin as a web application (desktop + mobile responsive) with scalable architecture to support future mobile applications and regional expansion.

The product is designed to feel:

- Premium
- Trustworthy
- Intelligent
- Easy to navigate
- Africa focused

2. Product Goals

Primary Goals

- Enable users to plan, book, and manage travel in one app.
- Froctionless payments, visas, and trust.
- AI-assisted decision-making for travel and visas
- Build a scalable foundation for future growth, partnerships, and potential acquisition.

3. User Types

1. Travelers

- Individual travelers

- Couples
- Groups
- Corporate travelers (later phase)

2. Admin / Operations

- Tripperr internal team
- Content managers
- Visa support managers
- Customer support

3. Service Partners (Phase 2)

- Visa agents
- Tour operators
- Corporate partners

4. Core Platform Modules & Features

A. User Accounts & Authentication

- User sign-up / login (email, Google, Apple)
- Secure authentication
- User profile (personal details, passport info – securely stored)
- Travel history & upcoming trips
- Saved preferences (budget, destinations, travel style)

B. Travel Booking Module

1. Flights

- Flight search via third-party API

- Price comparison (where available)
- Display in local currency
- Booking redirection or in-platform booking (depending on API)
- Booking confirmation & trip dashboard sync

2. Hotels & Accommodation

- Hotel search & discovery
- Integration with global providers
- Filters (price, rating, location, amenities)
- Booking via API / partner flow
- Booking history stored in user dashboard

3. Tours & Activities

- Integration with activities provider
- Destination-based browsing
- Add activities to itinerary
- Single or bundled bookings

4. Airport Transfers / Pickups

- Transfer booking where supported
- Linked to flight arrival details

C. Group Trips & Curated Experiences (Very Important)

This feature must remain a core pillar.

- Dedicated “Group Trips” section
- Upcoming curated trips with:
    - Destination
    - Dates
    - Itinerary
    - Price breakdown
    - Inclusions/exclusions
- Limited slots
- Booking + installment payment option
- Group trip dashboard for participants
- Admin tools to manage participants

D. Travel Savings Wallet & Payments

- User travel wallet (local currency)
- Wallet funding (bank transfer, card)
- Wallet usage for bookings
- Installment payment plans
- Transaction history

- Interest accrual (partner-led, compliant)
- Future-ready for multi-currency

Payments

- Local currency payments (Naira first)
- Card & bank transfer
- Crypto payments (Phase 2 – optional, compliance-driven)

E. Visa Assistance & AI Visa Engine

Phase 1 – Visa Information & Guidance

- Country visa requirements database
- AI-assisted visa guidance:
    - Required documents
    - Estimated timelines
    - General eligibility insights
- Visa cost estimation
- Country-specific visa pages

Phase 2 – AI + Human Support

- Document upload (secure)
- AI document checklist validation
- Option to pay for professional visa assistance
- Marketplace of vetted visa agents

- Status tracking

F. AI Travel Assistant (Phase 1)

- Conversational AI interface
- Helps users:
    - Choose destinations
    - Build itineraries
    - Suggest hotels/activities
    - Budget planning
- AI should feel like a smart concierge, not a chatbot

Later phases:

- Personalization
- Learning from user behavior
- Visa readiness scoring

G. User Dashboard

- Upcoming trips
- Past trips
- Wallet balance & transactions
- Visa applications & status
- Saved itineraries
- Support tickets

- Receipts & confirmations

H. Admin Dashboard

- Manage users
- Manage group trips
- Manage content (destinations, visa info)
- View bookings & transactions
- Manage visa agents
- Customer support tools
- Analytics (GMV, users, bookings)
